Below are the Windows 7 Service Pack 1 x64.ISO (SP1-1CH), x86.ISO (SP1-1CH), and x64.ISO (SP1-1CH) download links that are currently serving our internal servers. Note that the full-sized.ISO files are at about 5.5 GB in size and consist of a starter executable, setup1.box, and setup2.box, which cannot be burned to a DVD disc directly or mounted to a virtual DVD-ROM drive. As a result, the process to create a bootable Windows 7 DVD ISO image was pretty complex, and most of you found it challenging to get started. The.box files above are very small, almost the size of a single floppy disk, so we'll search Windows 7.box file compilation to convert it to a bootable DVD ISO image. In the previously mentioned bootable ISO image for Windows 7, we will include all files that are installed for Windows 7, like the,, and. If you are using an image that is not bootable, then you must replace the files with their original data or you will be unable to boot into Windows 7. Step 1: Click on the below link and select the options as per your requirements. Select Folder Name. The name of the folder you want to upload the files to will be generated automatically and will be named after the "Download ID". Download ID is what we will be using to monitor the successful uploading of the files. So please make sure you have a unique Name for your folder. It is recommended to use three to four characters only. Step 3: Once the upload is completed, please follow the Uploaded link given above to see the progress of the uploading process. Once the download is completed, you can check your Downloads folder and you will find a file named "Download.zip".

The only two things that you need to keep in mind are the download link and the build number. The link can be found in the release notes of the Windows 7 SP1 for Windows Vista, Windows 7 and Windows 8. We need the latest build number for our first stage, and this build number can be found in the release notes. The Windows 7 Ultimate installation discs are provided in a DVD format only, and the burned ISO files can be used to create a bootable Windows DVD. The.box format is convenient to create a bootable Windows 7 DVD and it can be burned to a DVD, as shown in the previous instructions. However, most of us use Windows 7 PCs, so the.box format could be ignored. If you want to create a bootable DVD from an ISO file, you need a USB flash drive, a USB DVD writer, or a computer with a DVD-ROM drive and Windows 7. The instructions here explain how to create a bootable Windows 7 DVD from the ISO file of Windows 7 Ultimate, 32-bit edition, downloaded from Microsoft; and if you're using Windows 7 Professional, Windows 7 Ultimate, or Windows 7 Enterprise (although it doesn't matter), you can use it to create a bootable DVD. You can use a Windows PC with a DVD-ROM drive to create a bootable Windows 7 DVD ISO image; however, I recommend to use a Windows 7 PC that has a USB flash drive or a USB DVD writer, to avoid rebooting your computer when needed. The.box format is convenient to create a bootable Windows 7 DVD and it can be burned to a DVD, as shown in the previous instructions. However, most of us use Windows 7 PCs, so the.box format could be ignored. 5ec8ef588b
