Some of the most powerful updates to Photoshop in decades are "Shape Match" and "Direct Selection," which have been updated to use modern APIs. Direct Selection allows you to make selections based on pixel data, even if they are transparent, and on any kind of intersecting mask, such as areas inside of a polygonal shape or an exact shape. These improvements enable you to easily create selections based on pixels, edges, and shapes. If you select a number of related shapes in your image, Photoshop will automatically link them together, making it easy to edit them as a group. Other Photoshop updates include new nodal UI, designing for multiple devices with accurate and consistent designs, and stronger support for slicing and editing on multiple datasources and devices. With the new pagination, users can edit datasources simultaneously and work across multiple Windows and Mac windows. However, for users who do not edit on multiple devices, the

pagination window still allows users to edit slices of content on an entire device, even if there are only a few windows open for editing. "Photoshop and the wider Adobe product portfolio are the world's most important tools in design, and with this update we are bringing rich design tools to the desktop, a truly immersive experience for those on the go, as well as an enhanced manipulation and editing experience across all our platforms," said David Wadhwani, VP and GM of Photoshop & Creative Cloud Software at Adobe. "We are making significant investments in this direction, and our goal is to make Photoshop and the Adobe suite the most powerful creative design tools within the enterprise to empower visionaries and creative artists everywhere to do the work that comes their way, at any time and from any place."
